System simulation of printed circuit boards including packages and connectors

January 1991 Proceedings of the 27th ACM/IEEE conference on Design automation

simulation software a model was created to investigate the performance of the AP und ...

Additional Information: full citation, abstract, references, citings, index

terms

K. Adamiak, R. Allen, J. Poltz, C. Rebizant, A. Wexler

Publisher: ACM Press

Full text available: pdf(573.59 KB)

An efficient method for analog simulation of printed circuit board systems is proposed. It is based on the transmission line model derived from the analysis of the electromagnetic field in a two-dimensional cross-section of devices. Simulation results for two circuits with IC package, cable and connector models are presented. The results confirm the effectiveness of this method.

5 The runtime creation of code for printing simulation output

John H. Reynolds

December 1990 Proceedings of the 22nd conference on Winter simulation

Publisher: IEEE Press

Full text available: pdf(403.30 KB) Additional Information: full citation, references, index terms

6 Manufacturing applications: A simulation case study of production planning and control in printed wiring board manufacturing

Heidi M. E. Korhonen, Jussi Heikkilä, Jon M. Törnwall

December 2001 Proceedings of the 33nd conference on Winter simulation

Publisher: IEEE Computer Society

Full text available: pdi(194.26 KB) Additional Information: full citation, abstract, references, index terms

Production planning and control in printed wiring board (PWB) manufacturing is becoming more difficult as PWB's technology is developing and the production routings become more complex. Simultaneously, the strategic importance of delivery accuracy, short delivery times, and production flexibility is increasing with the highly fluctuating demand and short product life cycles of end products. New principles, that minimize throughput time while guaranteeing excellent customer service and adequate c ...

7 An inheritance-based technique for building simulation proofs incrementally

January 2002 ACM Transactions on Software Engineering and Methodology (TOSEM),
Volume 11 Issue 1

**Publisher: ACM Press** 

Full text available: pdf(297.66 KB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>index terms</u>, <u>review</u>

This paper presents a formal technique for *incremental* construction of system specifications, algorithm descriptions, and *simulation proofs* showing that algorithms meet their specifications. The technique for building specifications and algorithms incrementally allows a child specification or algorithm to inherit from its parent by two forms of incremental modification: (a) *signature extension*, where new actions are added to the parent, and (b) *specialization* (subtypin ...

**Keywords**: Inheritance by specialization and subclassing for extension, incremental proof techniques, proof reuse, refinements, simulation proofs

8 Learning by doing with simulated intelligent help

John Carroll, Amy Aaronson

August 1988 Communications of the ACM, Volume 31 Issue 9

Publisher: ACM Press

Full text available: pdf(5.00 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> <u>terms</u>, <u>review</u>

Intelligent advisory interfaces will afford new approaches to help and training problems, however little is known about the usability of such facilities. This recent study indicates that although intelligent help can support users, there are also specific potential

problems.

9	Fast simulation method for the detection of reflection—and crosstalk effects during
	the design of complex printed circuit boards

E. Griese, J. Schrage, M. Vogt

September 1994 Proceedings of the conference on European design automation

**Publisher: IEEE Computer Society Press** 

Full text available: pdf(544.92 KB) Additional Information: full citation, references, index terms

10 Wireless session: information design methodology: Design methodology for wireless

Jean-Samuel Chenard, Chun Yiu Chu, Željko Žilić, Milica Popović

June 2005 Proceedings of the 42nd annual conference on Design automation

Publisher: ACM Press

Full text available: pdf(1.53 MB)

Additional Information: full citation, abstract, references, index terms

The need for mass-produced inexpensive wireless devices operating under strict energy constraints poses new challenges in the system design methodology. This paper presents a methodology for designing wireless nodes in which a low cost, reliable antenna is realized by printed circuit traces. We show how to combine the analysis from 2.5D and 3D EM simulators with the PCB design tools to create predictable nodes with printed antennas that meet stringent power and data transmission range goals. The ...

Keywords: RF CAD, antenna design methodology, printed antenna, printed circuit board

11 A simulation model of GECOS III

Kenneth E. Norland, William C. Bulgren

January 1971 Proceedings of the 1971 26th annual conference

Publisher: ACM Press

Full text available: pdi(1.39 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

A simulation model for a multiprogramming operating system has been devised and programmed in Simscript. Essential elements of the environment have been included such as job arrival rate, maximum number of jobs, the operating system overhead and peripheral and core allocation. Some allowances are made for time-sharing, as well as remote and normal batch jobs. The model is patterned basically after GECOS III, on the H-600 line computer. The hardware constraints considered when necessary are ...

**Keywords:** Computer system analysis, Multiprogramming, Simulation

12 A model for simulating the photographic development process on digital images

Publisher: ACM Press/Addison-Wesley Publishing Co.

Full text available: pdf(1.22 MB) Additional I

Additional Information: full-citation, references, citings, index terms

Keywords: digital effects, photography, post-processing, simulation, tone reproduction

	Digital control simulation system  H. Rex Hartson	*****

	Full text available: pdf(1.83 MB)  Additional Information: full citation, abstract, references, citings, index terms	
	Today there is widespread application of digital control circuitry in a wide range of products. This paper describes a simulation system in which the designer of these control circuits can interact with his design ideas before they are implemented in hardware. The Digitial Control Simulation System (DCSS) is a digital design description language with a set of programs to generate and execute a simulation program. The main use of this system (with an appropriate hardware interface	
14	A distributed database simulation language Harvey H. Rubinovitz, Fred J. Maryanski	*****
	March 1989 Proceedings of the 22nd annual symposium on Simulation	
	Publisher: IEEE Computer Society Press	
	Full text available: pdf(650.49 KB) Additional Information: full citation, abstract, references, index terms	
	This paper presents a software modeling environment for estimating the performance of distributed database systems. This tool supports a simulation language, HGPSS, which comprises various simulation primitives, contains a collection of network modules, and allows for the collection of statistics. This provides an overview of the HGPSS environment emphasizing its applicability to the modeling of distributed databases.	
15	Electromagnetic modeling and signal integrity simulation of power/ground networks in	0000000
<b>•</b>	high speed digital packages and printed circuit boards Frank Y. Yuan	5000000
	May 1998 Proceedings of the 35th annual conference on Design automation

	Additional Information: <u>full citation</u> , <u>abstract</u> , <u>references</u> , <u>index terms</u>	
	The electromagnetic modeling and parameter extraction of digital packages and PCB boards for system signal integrity applications are presented. A systematic approach to analyze complex power/ground structures and simulate their effects on digital systems is developed. First, an integral equation boundary element algorithm is applied to the electromagnetic modeling of the PCB structures. Then, equivalent circuits of the power/ground networks are extracted from the EM solution. In an integra

The topographic simulation technique, presented here, is part of the continuing development of the ACCEL1 system. It is based on the idea that the configurations of a circuit board can be represented in a topographic structure. This idea was first introduced to the authors by Dr. Iben Browning, Executive Director of the Thomas Bede Foundation in Los Altos, California. The ACCEL system was developed jointly by Sandia Corporation and the Thomas Bede Foundation, ...

18 Exploring team avionics systems by simulation

Glen A. Brent, Thomas M. McCalla

March 1978 Proceedings of the 11th annual symposium on Simulation

Publisher: IEEE Press

Full text available: pdf(778.91 KB) Additional Information: full citation, abstract, references, index terms

Simulation is being used to explore configurations of software and hardware in a nocritical-element team architecture. Future General Aviation aircraft avionics is expected to be significantly changed from present day configurations, through the introduction of low cost, highly integrated, powerful microprocessors. It is small, rugged, and lightweight. NASA sponsored simulation is providing proof that the team architecture will work. GASP-PL/I models are used to gain insight into the perfo ...

19 Automatic generation of a class of simulation models from databases

20 Manufacturing applications: Manufacturing 1: simulation-based analysis of a complex

printed circuit board testing process Jeffrey S. Smith, Yali Li, Jason Gjesvold

December 2002 Proceedings of the 34th conference on Winter simulation: exploring new frontiers

**Publisher: Winter Simulation Conference** 

Full text available: ndf(177.73 KB) Additional Information: full citation, abstract, references

This paper describes a simulation-based analysis of a printed circuit board (PCB) testing process. The PCBs are used in a defense application and the testing process is fairly complex. Boards are mounted on a test unit in batches and go through three thermal test cycles. As boards fail testing during the thermal cycling, operators can either replace the failed boards at fixed points during the cycling or can allow the test unit to complete the testing cycle before removing failed boards. The ...
